To whom it may concern: Spring 2015

I am writing to unequivocally recommend Yehuda Lelah. Yehuda is a student in my Introduction of coding course, a course that emphasizes the use of multiple modern computer programming languages in order to create viable products for the market. Yehuda has been by far the most capable, engaged, and productive students I have come across in my many years of teaching.
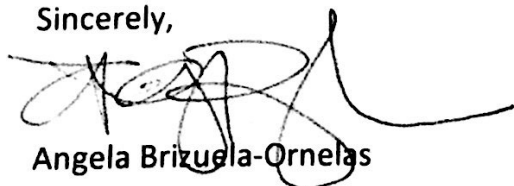

Yehuda has a great work ethic. Much of the assignments that are assigned in class are recommended to be done in class in order for the students' to have teacher help; Yehuda goes above and beyond and takes his coding projects home, tutors himself and seeks resources in order to further grasp the content. He has gone home and learned an additional six computer languages! Yehuda has a great ability to work within in a group. His tendency towards perfection pushes his group members to accomplish great feats.

When he is in the classroom, he is very insightful and is able to problem solve creatively. He is able to think critically and ask the most probing type questions in order to clarify his understanding and to grasp the concepts of computer programming. Because of such abilities, Yehuda would be a great addition to any program, offering help to those who run the program.

He has also been a very diligent student, he takes any task assigned to him and takes it to the next level. When students at Beverly Hills High School were unable to take a coding class in 2015, but still showed interest in computer programming, Yehuda helped organized an event called "BevHacks" in March 2015, in order to include those students. This event included an invitation to all students to spend 30 hours coding and taking workshops to improve their coding skills.

Yehuda is a hard worker; these mannerism contribute to his role of being a potentially successful person in any venture he may choose to partake. I recommend him with the highest regards. If there are any questions please contact me at abrizuela@bhusd.org.

Sincerely,

Angela Brizuela-Ornelas
